

William is sad

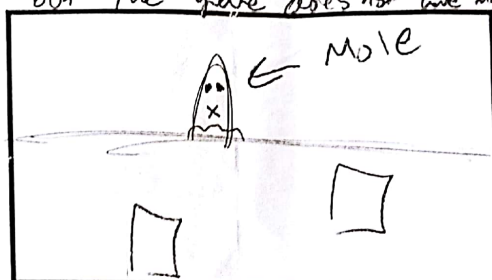

He wants to play the flash Motherload with his friend Tom, but the game does not have multiplayer

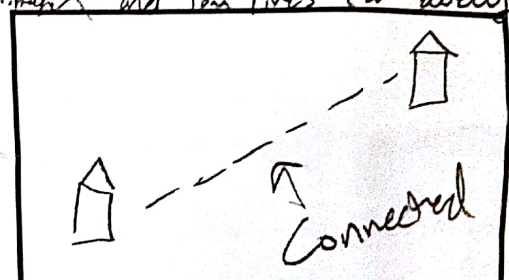

He knows that the sequel Super Motherload has multiplayer, but it is only local and Tom lives far away

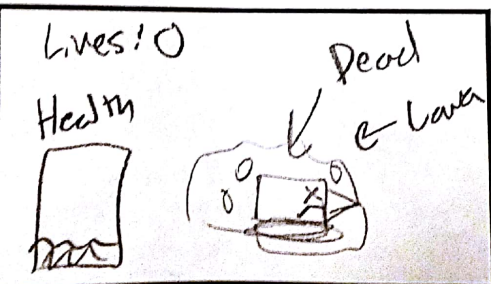

and lacks the roguelike elements of the original

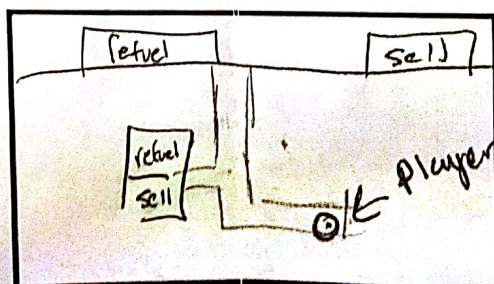

Then, a new game is released!

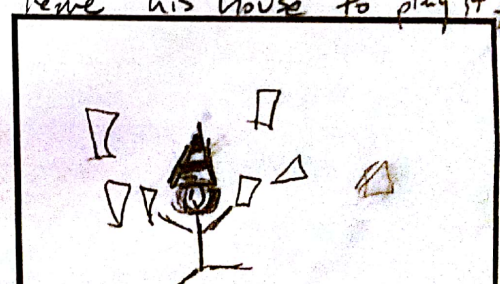

It has multiplayer with sockets, so he doesn't have to leave his house to play it

And it has the roguelike features of the original!

It also allows you to set up depots, making it less tedious than the flash game!

William is now happy
